ABOUT US

At MW Equipment LTD, we design and deliver high-performance solutions built to meet the real-world demands of modern worksites. Starting in the construction, demolition and agricultural sectors, we focus on creating equipment that improves safety, boosts productivity and streamlines day-to-day operations. Every product we develop is shaped by genuine industry knowledge and experience. Because our philosophy is simple:

Built for industry. By industry.

We're committed to giving businesses the equipment they need to work smarter, faster and more efficiently, without compromising on reliability or durability. As we continue to grow, we're expanding our expertise into a variety of other sectors, bringing our standards of innovation and practicality to even more environments.

MW EASY-LIFT SYSTEM

Smarter. Safer. More Efficient.

The MW Easy-Lift System is the all-in-one solution for safely moving site equipment using excavators of any size, forklifts, and telehandlers. It eliminates the need for chains, reduces unnecessary manual handling, and streamlines on-site lifting, helping your team work safer, faster and more efficiently.

Product Highlights

- Compatible with excavators, forklifts, and telehandlers
- Fewer machines required
- Reduced labour demand
- Lower fuel usage
- Significantly reduced risk
- Faster, safer material movement

When safety is paramount and efficiency is essential, the MW Easy-Lift System keeps your site moving.

FUELBAG

A robust, safe and efficient solution for on-site diesel storage and refuelling across a multitude of industries. Built for demanding environments, the FuelBag helps reduce downtime, boost productivity and maintain the highest safety standards.

At the heart of our design is the patented MW Easy-Lift System, enabling safe relocation without chains, secondary machines or a banksman. This allows the FuelBag to move easily across uneven, rough or waterlogged terrain, streamlining site operations.

The integrated high-performance dispensing system delivers fast, controlled fuel transfer, minimising spillage and waste. A clean, user-friendly layout makes daily operation and maintenance quick and straightforward.

Key Features	Benefits
2000L capacity	Reduces downtime and improves operational efficiency
Fully bunded tank	Enhanced environmental protection
80L/min pump and 8M retractable hose reel	Quick, controlled refuelling
Patented MW Easy-Lift System	Safer handling. No chains required
Heavy duty construction with S355 grade steel	Long service life and durability
Relocation friendly. Compact design	Improved site efficiency

WETBAG

A site-ready dirty water / trash pumping solution for removing surface water, flooded trenches and excavations. Designed for construction and infrastructure projects, the WetBag reduces downtime, improves safety and keeps sites moving in wet conditions.

The patented MW Easy-Lift System allows fast, chainless lifting and relocation using an excavator, ideal for uneven, waterlogged or restricted sites.

Pump directly to an outfall or into the non-bunded integrated tank for temporary storage and relocation. Built from heavy duty materials, the MWE WetBag is a flexible alternative to fixed pumps and temporary pipework, keeping projects productive in all weather conditions.

Key Features	Benefits
2000L capacity	Reduces downtime and improves operational efficiency
High output diesel or hydraulic 3" dirty water pump	Handles dirty, debris-laden water with ease and efficiency
Patented MW Easy-Lift System	Safer handling. No chains required
Direct discharge or tank-fed operation	Adaptability depending on site requirements
Designed for a wide range of applications	Ideal for construction, utilities and hire fleets
Heavy duty construction with S355 grade steel	Long service life and durability

DUSTBAG

A mobile dust suppression solution for construction, demolition, quarrying and civil engineering sites. Designed for demanding environments, the DustBag improves safety, compliance and productivity through effective, targeted dust control.

With a non-bunded integrated water tank, the unit is capable of operating in an entirely standalone manner, ideal for remote or fast-moving projects. An oscillating cannon produces a fine mist to suppress dust at source.

Manufactured from heavy duty materials, the MWE DustBag provides a safer, faster and more efficient alternative to fixed or manually positioned dust control systems.

Key Features	Benefits
2000L capacity	Reduces downtime and improves operational efficiency
180° oscillating cannon	Effective dust suppression while minimising water usage
Patented MW Easy-Lift System	Safer handling. No chains required
Designed to be standalone	Fewer hoses on site, reducing risk of damage and clutter
Adaptable, mobile and robust design	Applicable for a wide range of sectors
Heavy duty construction with S355 grade steel	Long service life and durability

FENCEBAG

A robust, time-saving solution for lifting, transporting, storing and positioning temporary security fencing. Designed to minimise manual handling, the MW FenceBag improves site safety, speeds up installation and boosts productivity across construction, events and infrastructure projects.

Manufactured from heavy duty steel, it securely carries up to 54 fence panels and features the MW Easy-Lift System for stable, controlled handling. Compatible with excavators, forklifts, telehandlers and cranes (model dependent), it simplifies both installation and dismantling while reducing labour costs and injury risk.

Key Features	Benefits
Fits UK standard security fence panels	Universal across sectors
Heavy duty construction with S355 grade steel	Long service life and durability
Patented Removable MW Easy-Lift System	Improved health and safety compliance and efficiency on sites
Stackable design	Ease of storage and transport
Easy-to-access design	Fast loading and unloading for faster fence installation and removal
Optimised vertical load orientation	Reduced manual handling and labour requirements

BARRIERBAG

The MW BarrierBag is a robust, time-saving solution designed to safely lift, transport and position pedestrian barriers across construction sites, highways projects, utilities works and events. Engineered around the patented MW Easy-Lift System, it transforms your excavator or telehandler into a highly efficient barrier handling solution, significantly reducing manual handling and improving site productivity. The MW BarrierBag streamlines barrier deployment and recovery, while enhancing on-site safety and operational efficiency, across multiple sectors.

Key Features	Benefits
Fits UK standard pedestrian / crowd control fence barriers	Universal across sectors
Heavy duty construction with S355 grade steel	Long service life and durability
Patented Removable MW Easy-Lift System	Improved health and safety compliance and efficiency on sites
Stackable design	Ease of storage and transport
Easy-to-access design	Fast loading and unloading for faster fence installation and removal
Optimised vertical load orientation and secure load positioning	Reduced manual handling, labour requirements and safer transport
Accommodates up to 144 barriers	Streamlines project management and accelerates stock taking

HOW WE WORK

Full Spare Parts Availability

A complete range of genuine MW spare parts is held in stock, ensuring rapid supply, reduced downtime, and long term reliability across your fleet.

We widely use a range of RHS, CHS and other common sections of steel. Generally graded at S355. We pay great attention to quality control to ensure that we are supplying our customers with premium products, made with high-grade materials and manufacturing procedures.

We work closely with our manufacturers. Not only as a supplier but also as a partner to provide quality equipment. All of our products are made with safety in mind and we highly value companies that share these values.

As a company that works closely with our customers, we can offer a bespoke design service, tailored to your specific needs. We collaborate with you throughout the process to design and build a product that's right for you. Please don't hesitate to contact us.

We welcome all customer and manufacturer feedback, as it helps us refine our designs and deliver the best possible solutions.

Got an idea? Get in touch and let's solve your problem.

WHY MWE

We work exclusively with established UK-based manufacturing partners, selected for their proven capability, capacity, and long term reliability. All our equipment is manufactured to ISO9001:2015 and ISO14001. Our supply chain is built around experienced, multi-site manufacturers, operating to recognised quality, safety, and environmental standards. This UK-focused approach delivers consistent quality, greater control, reduced supply chain risk, and dependable lead times, giving our customers confidence when delivering complex, high value, and demanding engineering projects.

Designed for environments where safety is critical and performance matters, the MW Easy-Lift System improves workflow, cuts downtime, and delivers consistent reliability on every job.
